

Introduction of the acid regeneration device

HANGZHOU MARGARITA COMPANY LTD

catalogue

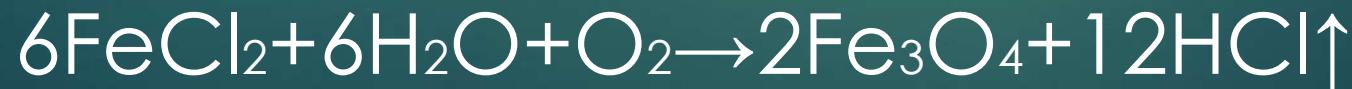

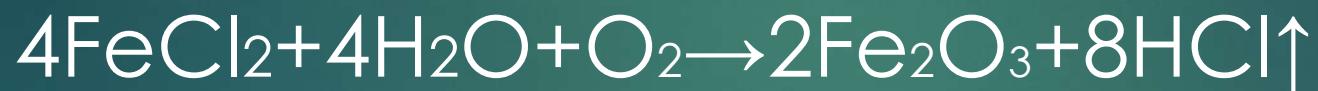

- 一、酸再生装置适用范围 Scope of application of the acid regeneration device
- 二、酸再生装置流程和原理 Process and principle of acid regeneration device
- 三、酸再生装置产品 Products of acid regeneration device
- 四、酸再生环保指标 Environmental protection index of acid regeneration device
- 五、酸再生装置运行费用 Operation cost of the acid regeneration unit

一、酸再生装置能做什么 The purpose of the acid regeneration device energy

- ▶ 钢铁行业冷轧板/硅钢片酸洗废盐酸的再生 Regeneration of cold rolled plate / silicon steel sheet in steel industry
- ▶ 钢丝绳酸洗废盐酸的再生 Regeneration of the waste hydrochloric acid in steel wire rope acid
- ▶ 钢管酸洗废盐酸的再生 Regeneration of the waste hydrochloric acid in steel pipe acid washing
- ▶ 氯化法钛白行业盐酸浸出液的再生 Regeneration of titanium chloride acid ach in in chloride chloride
- ▶ 采用氯化钴进行氧化钴粉末的生产 Cobalt chloride is used for cobalt oxide powder production
- ▶ 采用氯化物生产各种金属氧化物（各种金属氯化物的盐酸再生） Various metal oxides (hydrochloric acid regeneration of various metal chlorides)

二、酸再生装置流程和原理 Process and principle of acid regeneration device

1、主要反应方程式 The main reaction equation is the

净化废酸Purify waste acid

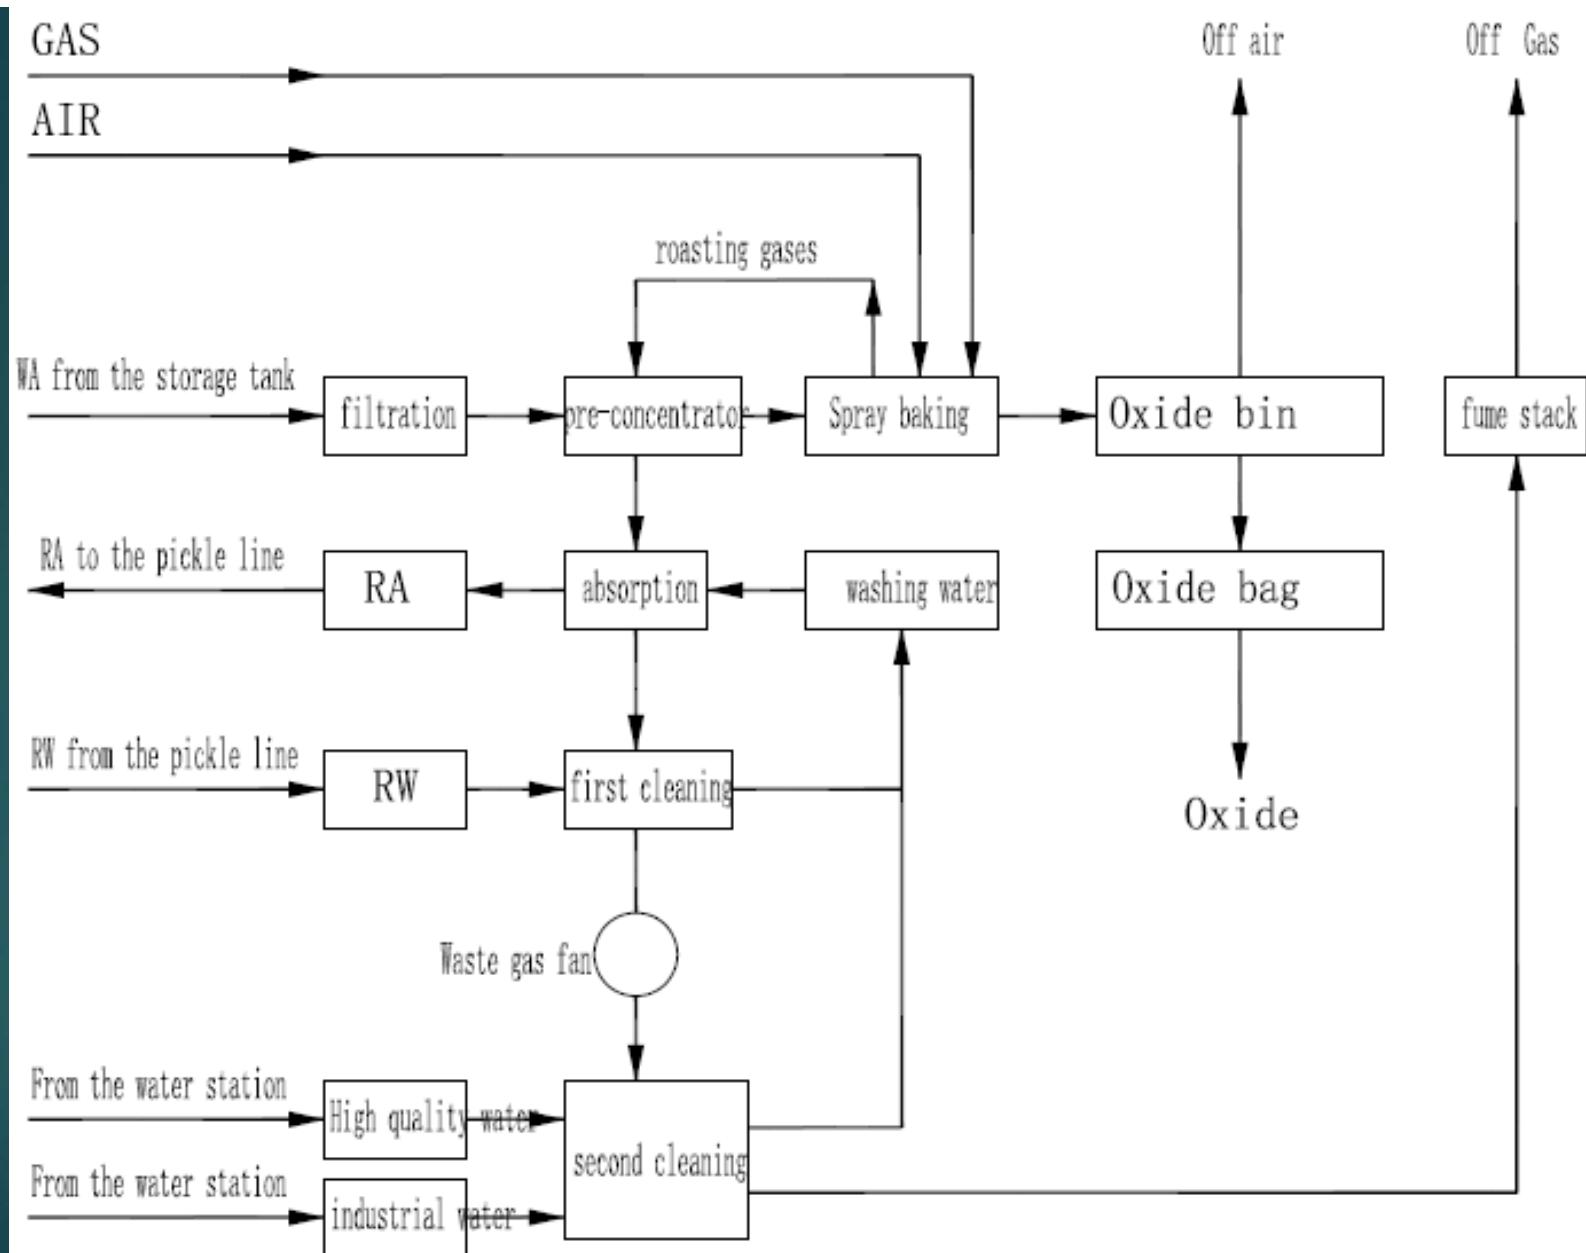

废酸waste acid

压滤泥饼Filter mud cake

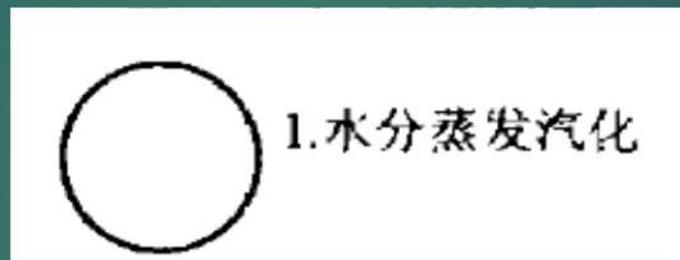

氧化铁粉Iron oxide powder

再生酸
regenerati
ve acid

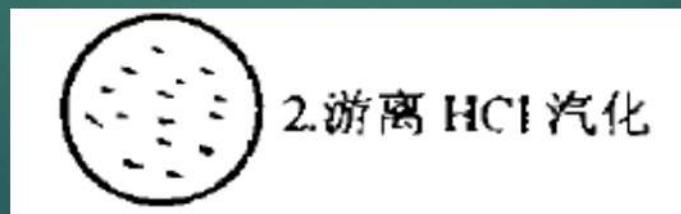

2、焙烧炉中的反应过程 Reaction process in the roaster

- ▶ 2.1、水分蒸发汽化 Water evaporation vaporization

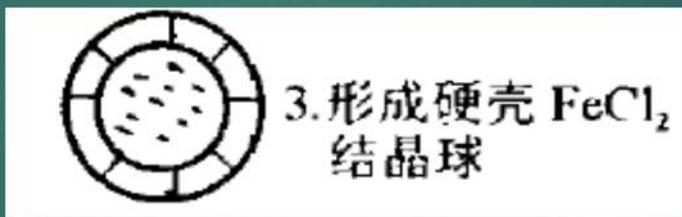

- 2.2、游离的HCl汽化 Free hcl is vaporized

2、焙烧炉中的反应过程 Reaction process in the roaster

- 2.3、形成硬壳 FeCl_2 结晶球 Form a hard-shell FeCl_2 crystalline sphere

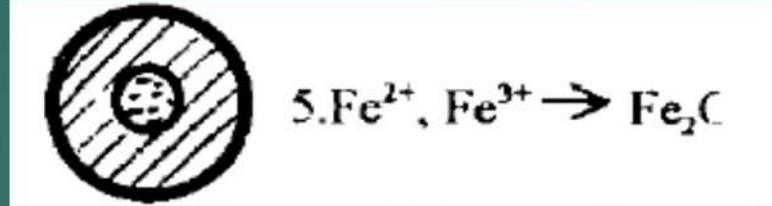

- 2.4、 Cl^- -离子减少 Less Cl^- -ions

2、焙烧炉中的反应过程 Reaction process in the roaster

- ▶ 2.5、形成Fe₂O₃

Forming the fe₂o₃

- 2.6、形成空心球 Form a hollow ball

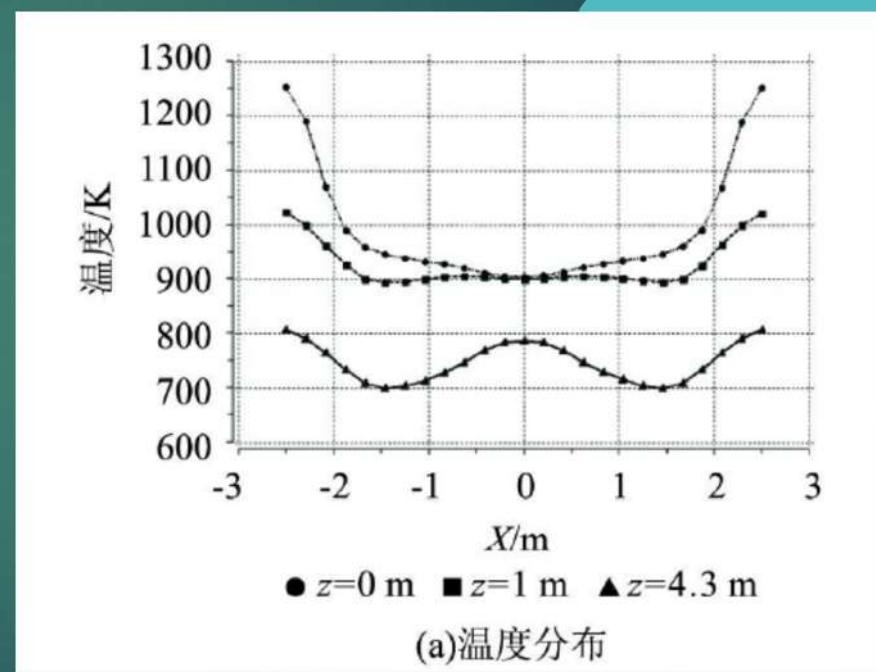

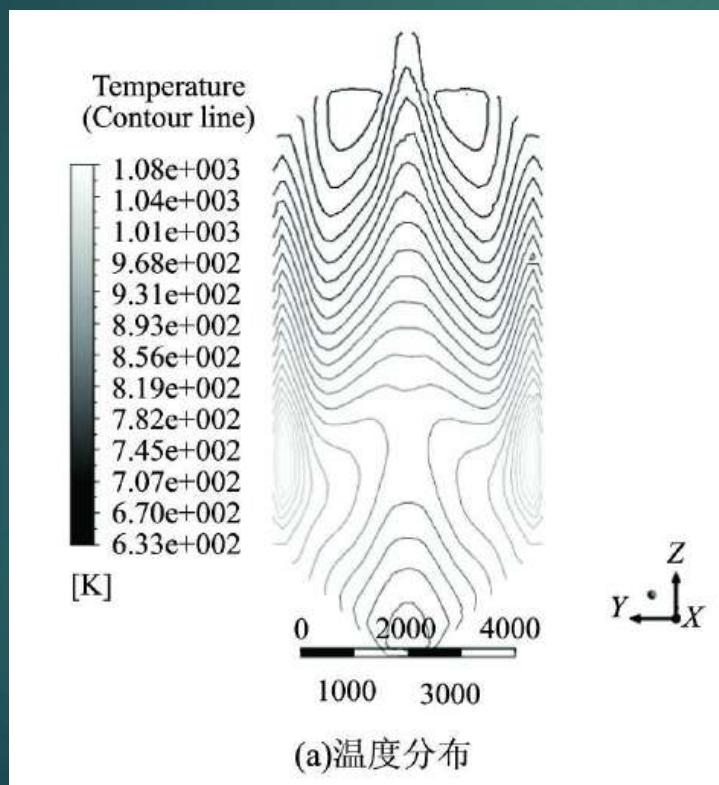

喷雾热分解过程中粉末形成过程示意图

4、双旋风除尘器Double cyclone dust collector

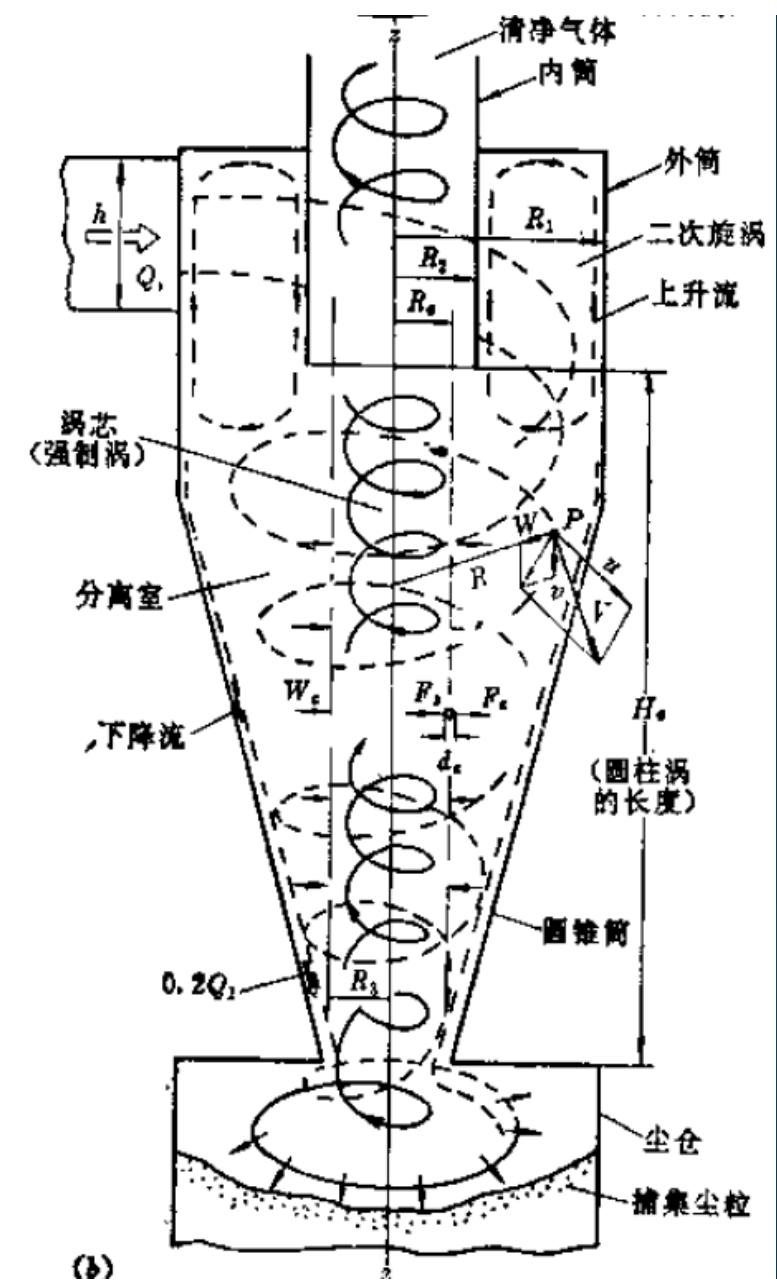

► 4.1、工作原理operational principle

旋风除尘器的除尘原理是使含尘气体作旋转运动，由于离心力的作用，尘粒沿筒壁旋转下降，净化的气体通过排气管排出。分离下来的尘粒则通过排尘口进入下部的卸尘装置。The dust removal principle of cyclone is to make the dust gas rotate. Due to the centrifugal force, the dust particles rotate and fall along the cylinder wall, and the purified gas is discharged through the exhaust pipe. The separated dust particles enter the lower dust discharge device through the dust discharge outlet.

酸再生装置中，旋风除尘器收集到的铁粉进入焙烧炉中。In the acid regeneration device, the iron powder collected by the cyclone collector enters the roasting furnace .

4.2、示意图diagrammatic sketch

除尘效率efficiency of dust collection :
50~60% (10um)

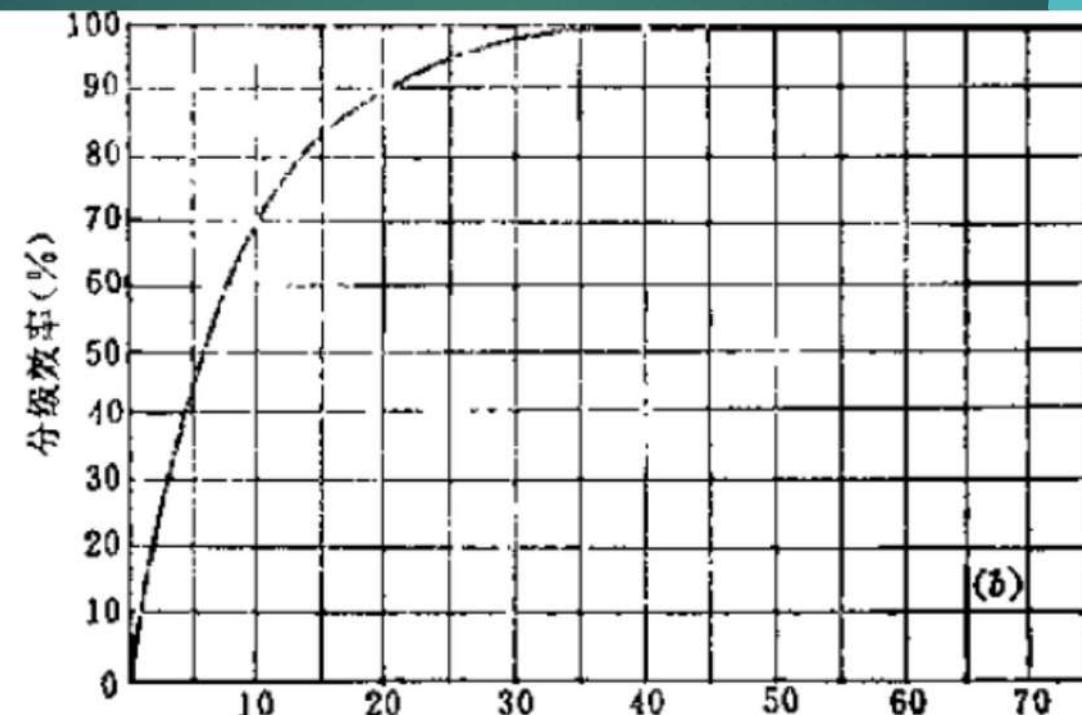

4.3、旋风除尘器特点Cyclone collector features

- ◆ 设备结构简单、造价低; The equipment structure is simple and low in cost
- ◆ 没有传动机构及运动部件，维护、修理方便; No transmission mechanism and moving parts, convenient maintenance and repair
- ◆ 可用于高温含尘气体的净化，350~550°C; It can be used to purify high temperature dust gas, 350~550°C.
- ◆ 可承受内、外压力; Can withstand the internal and external pressure
- ◆ 可干法清灰，可用它回收有价值的粉尘; Dry dust cleaning, it can be used to recover valuable dust
- ◆ 除尘器内敷设耐磨、耐腐蚀内衬后，可用于净化含高腐蚀性粉尘的烟气。The asion resistant and corrosion resistant lining can be used to purify the flue gas containing high corrosive dust

但，阻力损失大，般在1000~1500Pa之间，且不能捕捉小于5um的粉尘小粒子。However, the resistance loss is large, just between 1000 and 1500 p a, and small dust particles less than 5um cannot be captured

4.4、特性参数characteristic parameter

最大处理烟气量 Maximum amount of flue gasm ³ /h	可出去最小粒径及除尘效率Can go out of the minimum particle size and dust removal efficiency	pressure loss压 力损失pa	使用最高温度Use the highest temperature °C
85000	10um (50~60%)	250~1500	350~550

双旋风分离器现场照片 Double
Cyclone separator Field Photos

5、预浓缩器及分液器Pre-concentrator and liquid splitter

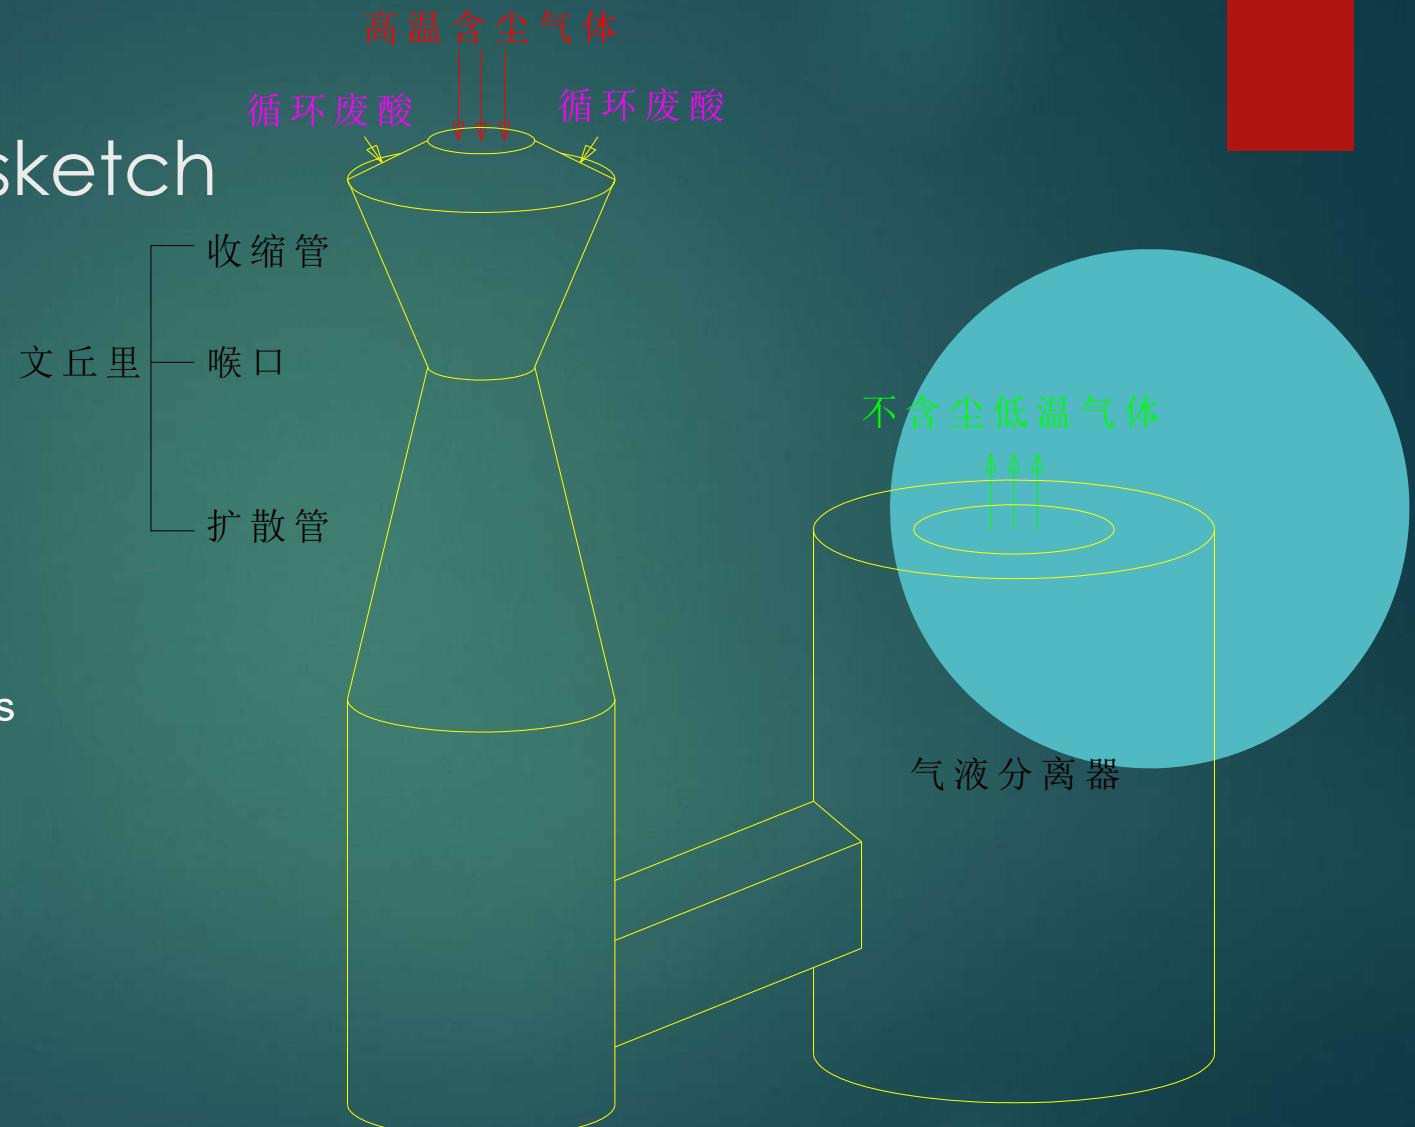

► 5.1、工作原理operational principle

主要由文丘里（有收缩管、喉管和扩大管三部分）和旋风分离器组成。 It is mainly composed of Venturi (with contraction tube, throat tube and expansion tube) and cyclone separator

含尘的气体进入收缩管，流速沿管逐渐增大，雾化的废酸和高温含尘气体接触，通过废酸中水分的蒸发而使高温气体降温，同时尘粒被润滑。进入扩大管后，流速逐渐减小，尘粒相互粘合，使颗粒增大而易除去。最后进入旋风分离器，由于离心力的作用，水与润滑的尘粒被抛至分离器的内壁上并向下流出器外，净制后的气体则由分离器中央管排出。 The dust gas enters the shrinkage pipe, and the flow rate gradually increases along the pipe. The atomized waste acid contacts with the high temperature dust gas, cooling the high temperature gas through the evaporation of water in the waste acid, and the dust particles are lubricated. After entering the expansion tube, the flow rate gradually decreases, and the dust particles adhere to each other, so that the particles increase and easy to remove. Finally into the cyclone separator, due to the centrifugal force, water and lubricated dust particles are thrown into the inner wall of the separator and flow out of the separator, after the net gas is discharged by the central pipe of the separator.

5.2、示意图 diagrammatic sketch

文丘里Venturi Ti-0.2Pd段section

5.3、文丘里特点 Venturi characteristics

- ◆ 设备结构简单、除尘效率高； Equipment structure is simple, high dust removal efficiency
- ◆ 有除尘和降温作用； Have the dust removal and cooling effect
- ◆ 可捕捉0.1um以上的粉尘； Capture the dust above 0.1um
- ◆ 缺点是阻力损失大； The disadvantage is the large loss of resistance

6、塔设备tower (吸收塔和洗涤塔Absorbers and detergents)

► 6.1、工作原理operational principle

利用吸收剂将混合气体中一种或数种组分（吸收质）有选择性的吸收分离过程称作吸收。参与吸收过程的吸收剂和被吸收剂分别为液相和气相。伴随着吸收过程的进行，必然发生气相到液相，液相到气相的传质过程。分为物理吸收（无明显化学反应）和化学吸收（有明显化学反应）。The selective absorption separation process of one or several kinds of components (absorbing matter) in the mixed gas is called absorption. The absorbent and the absorbent involved in the absorption process are the liquid and gas phase, respectively. With the absorption process, the gas phase to liquid phase, liquid phase to gas phase mass transfer process inevitably occurs. It is divided into physical absorption (without obvious chemical reaction) and chemical absorption (with obvious chemical reaction).

酸再生装置中主要是利用水作为吸收剂，吸收液相中的HCl气体。 The acid regeneration device mainly uses water as an absorbent to absorb the hcl gas in the liquid phase

碱洗塔中利用碱液和HCl发生反应进一步清除气体中的HCl气体。 Use the alkali solution and hcl reaction in the alkali washing tower to further remove the hcl gas from the gas

6.2、填料塔的特点 Features of the filler tower

优点advantage :

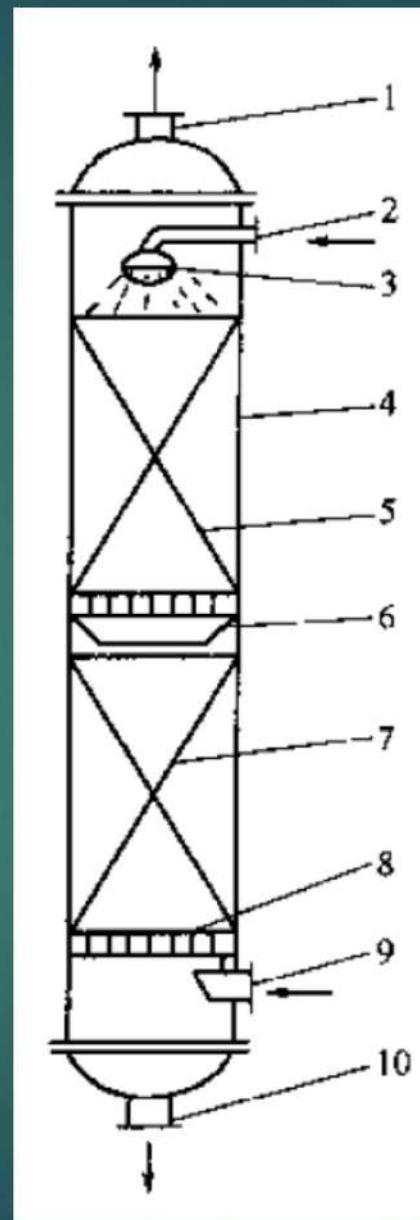

- 1、结构简单，无复杂部件； Simple structure, no complex components
- 2、适应性强，填料可以根据净化需要增减高度； Strong adaptability, the filler can be increased or reduced according to the purification needs
- 3、气流阻力小，能耗低，气液接触效果好。 Small airflow resistance, low energy consumption, and good gas-liquid contact effect
- 4、由于存在洗涤液的冷却作用，填料塔适用于较高温度的烟气净化。 Due to the cooling effect of washing liquid, the filling tower is suitable for flue gas purification of higher temperature

缺点defect :

- 5、当烟气中含尘浓度较高时，填料易堵塞，清理检修时填料损耗大。 When the dust concentration in the flue gas is high, the packing is easy to block, and the packing loss is large during cleaning and maintenance.

6.3、填料塔packing tower

填料塔对颗粒污染物也有很好的捕集效果。在填料塔中，填料表面积很大，洗涤液将填料表面湿润，在填料中有液滴捕尘作用，但主要是通过填料所形成的液网、液膜对尘粒进行捕集，因此对液滴雾化效果无过高要求，同时对气液比、过滤风速等运行条件有较高的操作弹性。 The iller tower also has a good catching effect on particle pollutants. In the packing tower, the filler surface area is very large, washing liquid will wet the filler surface, in the filling droplet dust, but mainly through the packing formed by the liquid network, liquid film for dust particles, so the droplet atomization effect without high requirements, at the same time to the air-liquid ratio, filtration wind speed and other operating conditions have high operating elasticity.

- 1—气体出口；2—液体入口；
3—液体分布装置；4—塔壳；
5—填料；6—液体再分布器；
7—填料；8—支撑栅板；
9—气体入口；
10—液体出口

6.4、填料的选择原则 Filler material selection principle

- ◆ 较大的比表面积、较高的空隙率; Large specific surface area, higher voiding ratio
- ◆ 填料具有较大的通量，气体通过时阻力低; Fillers have a large flux and a low resistance upon gas passage
- ◆ 有较高的传质效率; There is a high mass transfer efficiency
- ◆ 操作弹性大，性能稳定; Operating flexibility and stable performance
- ◆ 能满足物系的腐蚀性、污堵性、热敏性等特殊要求; It can meet the special requirements of corrosion, pollution plugging, thermal sensitivity and so on
- ◆ 强度要高，便于塔的拆装、检修; The strength should be high, easy to facilitate the disassembly of the tower, maintenance
- ◆ 价格低廉。 price moderate

7、自动包装机automatic packaging unit

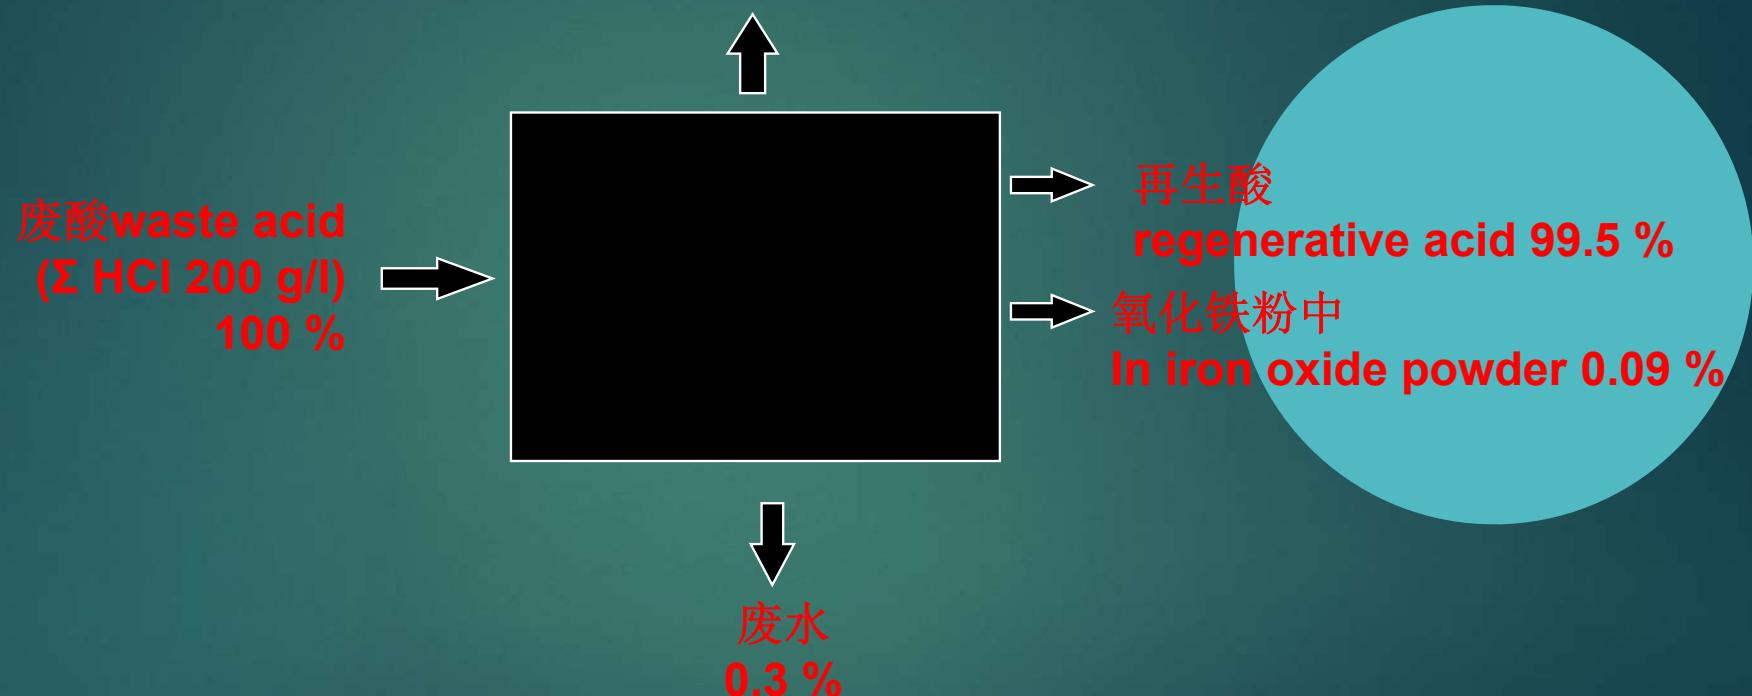

再生酸浓度、吸收温度、分压的关系图

Plot of regenerative acid concentration, absorption temperature, and partial pressure

3、酸再生装置中HCl的平衡Equilibrium of hcl in the acid regeneration apparatus

排放入大气Emission into the atmosphere 0.11%

说明 explain : Cl-要么被回收形成再生酸，要么进入铁粉或者环境中The cl-is either recycled to form regenerative acid or into iron powder or the environment 。进入铁粉中则影响铁粉质量，进而影响铁粉售价Enter the iron powder affects the quality of iron powder, and then affect the price of iron powder ; 进入环境中，则污染环境，与建设装置目的不符Into the environment, the environment pollution, and inconsistent with the purpose of the construction device 。因此回收率高低，不仅是回收盐酸的多少，更重要的是环保排放指标的保证。Therefore, the recovery rate is not only the amount of hydrochloric acid recovered, but also the guarantee of environmental protection emission indicators

五、酸再生装置运行费用 Operation cost of the acid regeneration unit

- 1、酸再生装置运行已知条件为国内某大型钢厂实际运行取费。 The operation condition of the acid regeneration device is known for the actual operation cost of a large steel mill in China
- 2、酸再生装置能力以7500L/h为例。 The capacity of the acid regeneration device was exemplified at 7500l / h
- 3、以满负荷酸操作运行6700h/年进行计算。 Calculate at 6700h / year
- 4、废盐酸铁离子浓度120g/l, ΣHCl 浓度200g/l。 The waste iron hydrochloride concentration was 120g / l and the hcl concentration was 200g / l.

废酸生产成本合计和产出费用 Total waste acid production cost and output cost

运行成本合计	万元				¥1,725.69
每立方废酸消耗总计(元/立方废酸)					¥343.42 元/m ³

序号	项目名称	单位	产品量		单价(元)	年收入 (万元)
			单套每小时	单套每年		
1	氧化铁粉	吨	1.2525	8391.75	¥1,300.00	¥1,090.93
2	再生酸	m ³	7.5	50250	¥191.61	¥962.85
	收入估算					¥2,053.78
备注: 1、氧化铁粉产量按照机组正常运行时计算; 价格按照1300元/吨计算。 2、再生酸价格由新酸价格折算而成, 新酸价格按照330元/吨计算。 再生酸价格=新酸价格×18%÷30%						
产出折算: 元/立方废酸						¥408.71 元/m ³

- 1、可以看出废酸装置是可以赚钱的。
- 2、需要装置连续稳定运行, 经我公司装置实际测算, 每次需连续酸操作运行约20天, 则装置持平。
- 3、氧化铁粉质量对产出费用影响较大。因此酸再生装置应充分提高氧化铁粉质量。
- 4、废酸生产消耗为213.79元/m³, 管理及维护费用为129.63元/m³。因此应加强设备的巡检和维护、注意生产操作的仔细, 以减少设备的更换。

作业率的影响

单套机组运行，酸操作时按满负荷生产计算，水操作时按最低负荷生产。低于50%则选择停车等待，需增加罐区和开停车费用

序号	作业率	消耗 (万元)	产出 (万元)	固定费用	半固定费用	利润 (万元)	备注
1	100%	¥1,027.33	¥2,053.78	568.8043	¥82.57	¥375.07	
	90%	¥990.79	¥1,848.40	568.8043	¥82.57	¥206.23	
	80%	¥954.25	¥1,643.03	568.8043	¥82.57	¥37.40	
	70%	¥917.71	¥1,437.65	568.8043	¥82.57	¥-131.44	
	60%	¥881.17	¥1,232.27	568.8043	¥82.57	¥-300.28	
	50%	¥844.63	¥1,026.89	568.8043	¥82.57	¥-469.12	
	40%	¥808.10	¥821.51	568.8043	¥82.57	¥-637.96	
	30%	¥771.56	¥616.13	568.8043	¥82.57	¥-806.80	

由上表可以看出，该装置在作业率低于80%时开始亏损。 As can be seen from the above table, the operation rate is less than 80% and the loss begins.

生产能力的影响Impact of production capacity

单套机组操作时间和费用，非酸操作则停车

由上表可以看出，操作时间约少，则开停车次数越多。年酸操作时间应在5000h以上，才能保证持平。

As can be seen in the above table, the less operation time, the more open and parking. The annual acid operation time should be more than 5000h, to ensure the flat.

废酸铁离子浓度的影响Effect of iron ion concentration of waste acid

序号	单套机组，装置正常满负荷生产情况下		每立方废酸产量	0.167	吨 (120g/l铁浓度)		产出收入	每降低1g铁离子浓度每年减少收入(万元)
	铁离子浓度	每立方废酸产量	每小时铁粉产量	每天产量	每月产量	每年产量		
1	g/l	吨	吨	吨	30天	6700h	万元	每降低1g铁离子浓度每年减少收入(万元)
2	120	0.1671	1.25325	30.078	902.34	8396.775	¥1091.5807	¥9.3414

8	60	0.0814	0.6105	14.652	439.56	4090.35	¥531.7455	¥9.3414
9	50	0.0671	0.50325	12.078	362.34	3371.775	¥438.3307	¥9.3414

由上表可以看出，废酸中每减少1g铁离子浓度，产出每年减少¥9.3414万元。因此，应要求酸洗线尽最大能力使用盐酸，排出较高浓度的含铁废酸。 As can be seen from the above table, for every 1g of iron ion concentration reduced in the waste acid, the output is reduced by ¥93,414 million per year. Therefore, the pickling line should be required to use hydrochloric acid to discharge higher concentrations of iron-containing waste acid.
