CDI SPARK 4260

Addresses the highest quality flexo applications, primarily in the flexible packaging and folding carton markets, with inroads also in corrugated. With its larger size plates and impressive productivity, but yet entry-level price, this device fits the demands of tradeshops and converters.

THERE ARE 4 THINGS THAT ALLOW YOU TO COMPETE AT THE HIGHEST LEVEL OF FLEXO QUALITY:

1. CDI

The CDI imager is an essential part of every flexo plate making workflow. There is a CDI imager for every setup, whether you produce plates for labels, folding carton or corrugated.

2. HD Flexo

HD Flexo and Full HD Flexo are the new industry standards for flexo quality. Finally flexo can rival gravure and offset in packaging printing quality. The print-runs are becoming shorter, which means that flexo is more than ever a very good candidate to take of print jobs that used to be done exclusively in gravure.

3. Flexo prepress tools

Esko has a full range of dedicated flexo prepress tools: from prepress editors, over prepress automation to flexo retouch tools in Adobe Photoshop.

4. An optimized platemaking workflow

The Digital Flexo Suite allows you to reduce flexo plate waste, eliminate human errors and boost your platemaking throughput. A clever combination of advanced software and a digital flexo cutting table make sure that you work much faster while increasing the quality of your flexo plates.

our best match, based on your answers, is the **CDI Spark 4260** flexo imager.

Together, we believe you can do great things!

This imager has a maximum plate size of 42" x 60" (1067 x 1524 mm) and comes with a range of optics depending on your needs. Want to do more in less time? Optics 15 give the fastest throughput for this model.

15 1.5 m²/h - 64 min.

25 2.5 m²/h - 38 min.

40 4.0 m²/h - 24 min.

80 8.0 m²/h - 12 min.
