Chapter 5 – Description of the packaging machine and general principles of its functioning

In this chapter the various parts making up the packaging machine are described, as are the main parts making up the electrical panel mounted on the machine and pneumatic components.

5.1 – Main parts

The machine is made up of the following main parts:

- Weighing unit Mod. APE – PL with two heads and interface unit.
- Feeding device for introducing the product.
- Frame and metalwork with support for the electrical panel.
- Packaging machine.

Below the drawing of the complete machine is shown.
