

Specification of LEM9325 Glass Straight Line Edging Machine

Specification:

The LEM9325 series glass straight line edging machine is suitable for different size and thickness flat glass grinding, it can rough grinding、fine grinding and polishing finish in one time; the polishing flat is similar to the smooth degree of glass body, While adjusting the different processing thickness, (you can reference the digital display in front beam to adjust) ; front chamfer motor can move synchronically with front beam; with advanced structure; high precision, easy operation. It is the necessary tool for glass machinery.

Advantage:

- 1.Base、Beam、Swing frame、upright all is used by high-quality castings, strong and stable body, square beam never deformation.
- 2.Senior special energy-saving motors 'XINDONGYA' or 'JIANQIANG' brand, advanced turbine gearbox; DELIXI brand electric appliance.
- 3.2.2KW big range speed governor, JIALI worm gear box, transmission more durable.
- 4.Chain transfer, thicken square tube frame can load thicken glass to process.
- 5.The wheel is used by CHAORUI、Oasis New; bottom polishing wheel is 10S40、CE3 or SD001,the polishing effect is similar to mirror surface;
- 6.This machine can accord customer's requirement to design.

Model	MIN					
LEM9325	80×80mm	0.8-5m/min	3-25mm	18.5kw	3000kg	6.8×1.0×2.5m

Glass sample as following:
